وادي الصفوة الزراعية
WADI ALSAFOH

FERTILIZERS

Boarding

COMPOSITION

Component	Content (w/w)
Humic acid	70%
Fulvic acid	15%
Potassium (K_2O)	11%

DESCRIPTION AND BENEFITS

Boarding

Country of origin: China

Potassium humate powder improves the physical, chemical and biological properties of soil, nutrient availability, productivity and fertilizer utilization through chelation. Its high humic acid, fulvic acid and potassium content increases cation exchange capacity and nutrient retention, reducing leaching, especially in sandy soils low in organic matter.

APPLICATION RATES

Crop	Application rate
Forage crops	2-4 kg/ha with irrigation water
Open-field vegetables	2-4 kg/ha with irrigation water
Fruit trees	2-4 kg/ha with irrigation water

COMPATIBILITY

Repeat according to the fertilization program. Do not mix with acids, high-calcium products or high-pH compounds. Conduct a mixing test before use.
