FERTILIZERS

CALBOVALLE®

COMPOSITION

Component	Content (w/v)
Calcium (CaO)	16%
Nitrogen (N)	10.3%
Boron (B)	0.9%
Organic acids (gluconic acid)	7.5%
Organic matter (sodium gluconate)	8.5%
Density	1.38 kg/L

CALBOVALLE

Country of origin: Spain

MADE IN SPAIN

DESCRIPTION AND BENEFITS

Liquid fertilizer containing complexed calcium with nitrogen and boron for efficient uptake and calcium transport to growing tips. Strengthens cell walls, improves fruit firmness and quality, and prevents calcium deficiency such as blossom-end rot. Improves pollination, vegetative growth and nutrient uptake, increasing crop quality, yield and tolerance to transport and storage. Calcium is fully complexed (100%) with organic chelating agents (gluconates), addressing its limited mobility in plants and ensuring effective delivery to young tissues, unlike non-chelated calcium sources.

APPLICATION RATES

Crop	Foliar spray rate
All crops	1.5-2 L/1,000 L water

COMPATIBILITY

Do not mix with phosphoric acid, sulfur or urea. Conduct a small mixing test before use.
