HERBICIDES

CLEAR TOP

Active ingredient:

Clethodim 24%

Product properties:

A selective systemic post-emergence herbicide for annual and perennial grass weeds in fruit trees, ornamental plants, potatoes, garlic, onions, alfalfa, tomatoes, legumes and peanuts. Treated weeds stop growing, turn yellow and their remaining leaves collapse. Symptoms appear within 7-14 days, depending on the weed species and weather conditions.

Application rates and method

Crop	Target weeds	Application rate	Spray timing	PHI
Alfalfa, tomato	A broad range of annual grass weeds	400-500 mL/ha	From 3 leaves to the start of tillering	15 days
Legumes	A broad range of annual grass weeds	400-500 mL/ha	From 3 leaves to the start of tillering	20 days
Fruit trees	A broad range of perennial grass weeds	0.75-1 L/ha	From 3 leaves to the start of tillering	30 days
Potato, garlic, onion	A broad range of perennial grass weeds	0.75-1 L/ha	From 3 leaves to the start of tillering	60 days
