وادي الصفوة الزراعية
WADI ALSAFOH

HERBICIDES

CORNET

Active ingredient:

S-metolachlor 96%

Product properties:

A selective herbicide applied after sowing and before emergence in maize to control grass weeds and some broadleaf weeds. It is absorbed mainly by the shoots of weed seedlings at the start of germination.

Application rates and method

Crop	Target weeds	Weeds suppressed	Application rate
Maize	Digitaria spp.; Echinochloa spp.; Setaria spp.	Amaranthus spp.; Portulaca spp.; Sorghum spp.	1.25-1.75 L/ha
Onion, potato	Digitaria spp.; Echinochloa spp.; Setaria spp.	Amaranthus spp.; Portulaca spp.; Sorghum spp.	1.25-1.75 L/ha
