FUNGICIDES

DEVELITE

Active ingredient:

Difenoconazole 25%

Product properties:

A systemic preventive and curative triazole fungicide. Effective against a broad range of fungal diseases affecting leaves and ears of cereals and other crops, including rust, powdery mildew, Septoria, Fusarium, Cercospora and Helminthosporium.

Application rates and method

Crop	Target diseases	Application rate	Application method / timing	PHI
Potato	Early blight	0.5 L/ha	Repeat every 14 days at the higher rate; 4-7 sprays/season.	14 days
Tomato	Early blight; Septoria leaf spot	0.5 L/ha	Start at the first signs of disease.	7 days
Cucurbits: cucumber, watermelon, melon, zucchini	Powdery mildew; anthracnose; stem blight	0.5 L/ha	Start at the first signs of disease.	3 days
Onion, garlic	Purple blotch; blight; rust	0.5 L/ha	Start at the first signs of disease.	7 days
Brassicas: turnip, cabbage	White and dark leaf spots	0.5 L/ha	Start at the first signs of disease.	21 days
Carrot, pepper	Alternaria spot; Cercospora leaf spot; anthracnose	0.5 L/ha	Start at the first signs of disease.	Carrot: 14 days Pepper: 3 days
Bean, broad bean, pea	Alternaria spot; Ascochyta blight; powdery mildew	0.5 L/ha	At early flowering and during pod filling.	14 days
Pome fruits	Scab; rust; powdery mildew	20 mL/100 L water	Preventive: every 7-10 days from green tip to 10 mm buds. Curative: within 96 h of infection, until buds reach 20-30 mm.	14 days
Citrus	Scab	20 mL/100 L water	First spray at bud stage; repeat every 28 days.	14 days
Mango	Powdery mildew	0.4-1 L/ha	First spray at flowering; repeat every 28 days.	14 days
Grape	Powdery mildew; black rot; black arm	20 mL/100 L water	From early season; repeat every 10-14 days, 6-8 sprays/season.	14 days
Wheat	Powdery mildew; rust; Septoria; Alternaria spot	0.5 L/ha	From flag-leaf emergence to flowering; early sprays may cause wheat sensitivity.	21 days
Ornamentals: rose, carnation	Powdery mildew; rust; black spot	0.6 L/ha	At the start of flower formation.	-
