WADI ALSAFOH

FUNGICIDES

DRONSE

Active ingredient:

Hymexazol 30%

Product properties:

A systemic preventive and curative fungicide for soil-borne diseases such as root rot, wilt and damping-off. Absorbed through roots and translocated within plant tissues, it protects roots and new growth and prevents disease progression. It supports root growth and plant vitality, limits disease-causing fungi in the root zone, and provides long-lasting protection with high stability in soil.

Application rates and method

Crop	Target diseases	Application rate	PHI
Vegetables: cucurbits, pepper, tomato, eggplant, okra, beans	Damping-off and wilt caused by Pythium and Fusarium	100-150 mL/100 L water; drench roots immediately after planting at 3 L solution/m2	30 days
Fruit-tree and forest-tree seedlings	Wilt caused by Pythium and Fusarium	100-200 mL/100 L water; drench after planting at 3 L solution/m2	30 days
Ornamental plants	Wilt caused by Pythium and Fusarium	100-150 mL/100 L water; drench after planting at 3 L solution/m2	30 days
