FUNGICIDES

EXTRA DONE

Active ingredients:

Cymoxanil 30%

Famoxadone 22.5%

Product properties:

A combination fungicide highly effective against major fungal diseases, especially late blight and downy mildew. Famoxadone is an oxazolidinedione QoI fungicide with contact activity that inhibits mitochondrial respiration, stopping spore germination and fungal spread on the plant surface. Cymoxanil, a cyanoacetamide oxime, has local translaminar activity and penetrates leaf tissue. Its rapid curative action stops fungal development at early infection stages. This combination provides preventive and curative protection.

Application rates and method

Crop	Target diseases	Application rate	Spray timing	PHI
Tomato	Early and late blight	0.4 kg/ha or 40 g/100 L water	Before flowering until before harvest	5 days
Cucurbits	Downy mildew; Alternaria	0.4 kg/ha or 40 g/100 L water	Before flowering until before harvest	5 days
Potato	Early and late blight	0.4 kg/ha or 40 g/100 L water	Before flowering until before harvest	4 days
Grape	Downy mildew	0.4 kg/ha or 40 g/100 L water	5-6 leaf stage until one month before harvest	28 days
