وادي الصفوة الزراعية
WADI ALSAFOH

HERBICIDES

IMAZELITE

Active ingredient:

Imazethapyr 70%

Product properties:

A systemic herbicide for a broad range of grass and broadleaf weeds at the second-leaf stage. It is absorbed and translocated within the plant for effective control. Suitable for alfalfa planted in winter or spring, during dormancy or semi-dormancy and between harvests.

Application rates and method

Crop	Growth stage	Application rate	PHI
Newly planted alfalfa	Alfalfa seedlings at the 2-3 leaf stage	107 g/ha	30 days
Established alfalfa	Before growth begins, during dormancy or after cutting	142 g/ha	30 days
