PUBLIC HEALTH PESTICIDES

LARFEN

BENEFITS

- Highly effective against fly larvae.
- Prevents larvae developing into adult insects.
- Helps reduce infestation over the long term.
- Suitable for public health programs.
- Reduces the need for insecticides against adult insects.

ACTIVE INGREDIENT

Pyriproxyfen 10% EC

Chemical group: Insect growth regulators (IGR)

DESCRIPTION

Emulsifiable concentrate public health insecticide for fly larvae. Disrupts metamorphosis and prevents larval development into adults, breaking the pest life cycle and limiting spread.

APPLICATION RATES

Target pest	Dilution rate	Application rate
Housefly larvae	1 mL product / 40-50 mL water	400-500 mL spray solution/10 m^2

APPLICATION METHOD

Spray larval breeding and gathering sites with a suitable sprayer. Thoroughly cover treated surfaces.
