PUBLIC HEALTH PESTICIDES

MAX

BENEFITS

- Prevents immature insects from developing into adults.
- Extended activity through disruption of the life cycle.
- Relatively safe for humans when used correctly.

ACTIVE INGREDIENT

Pyriproxyfen 10% EC

Chemical group: Insect growth regulators (IGR)

DESCRIPTION

Emulsifiable concentrate insecticide for public health pest control, especially housefly larvae. Disrupts molting and metamorphosis, preventing development into reproductive adults and breaking the life cycle.

APPLICATION RATES

Target pest	Dilution rate	Application rate
Housefly larvae	1.5 mL product / 50-100 mL water	50-100 mL spray solution/m²

APPLICATION METHOD

Spray insect breeding sites, including stagnant water and contaminated surfaces.
