FUNGICIDES

SOLFAN

Active ingredient:

Sulfur 80%

Product properties:

A preventive fungicide formulated as water-dispersible granules. Highly effective against many fungal diseases, especially powdery mildew and scab, with acaricidal activity against some mites. Sulfur acts by contact and is converted on the plant surface into active sulfur compounds that affect fungal cell processes, stopping spore growth and limiting infection. It also helps reduce populations of some mites.

Application rates and method

Crop	Target diseases	Application rate	PHI
Tomato, melon, zucchini	Mites; powdery mildew	200-300 g/100 L water	3 days
Bean, broad bean, cowpea, pea	Mites; powdery mildew	200-300 g/100 L water	7 days
Citrus	Powdery mildew; scab	100-200 g/100 L water	14 days
Grape, peach, apple	Mites; powdery mildew; scab	200-300 g/100 L water	7 days
Date palm	Mites; mite infestations; smut	300 g/100 L water	7 days
Berries	Powdery mildew; silver mite	200 g/100 L water	7 days
Ornamental plants	Mites; powdery mildew	200-300 g/100 L water	-
