وادي الصفوة الزراعية
WADI ALSAFOH

HERBICIDES

SUPER CLEAR

Active ingredient:

Metribuzin 75%

Product properties:

A selective systemic herbicide used on potatoes before and after emergence, on transplanted tomatoes in open fields, and on alfalfa only. Controls broadleaf weeds and annual meadow grass (Poa annua). For good distribution in the root zone, the soil should be moist and the surface layer finely tilled.

Application rates and method

Crop	Application timing	Soil type	Application rate	PHI
Potato	Pre-emergence; spray once/season. Weeds must not exceed 2.5 cm.	Light	0.47-0.70 kg/ha	60 days
Potato	Pre-emergence; spray once/season. Weeds must not exceed 2.5 cm.	Medium to heavy	0.70-0.93 kg/ha	60 days
Potato	After emergence up to 5 cm height. Exceeding this height may damage plants.	Light, medium, heavy	0.47 kg/ha	60 days
Field tomato	About 10 days after transplanting	Light, medium, heavy	0.47 kg/ha	42 days
Alfalfa	Second crop year, during dormancy; forage alfalfa only, not seed production	Light, medium, heavy	0.47-0.70 kg/ha	38 days

Controls broadleaf weeds and annual meadow grass
